

SOFTWARE ENGINEER

- June - August 2025: Internship with DeepFile (AI startup based in Berlin, Germany)
- Linux administration and management experience, including Fedora, Ubuntu, FreeBSD
- Programming languages: C++, Java, C#, Shell, Llama, Swift, JavaScript (including React), Python

EDUCATION

Bachelor of Science

University of California, Irvine – Software Engineering

Projected graduation: June 2027

GPA: 3.7 / Dean’s Honor List – Spring 2024

Key coursework: Data Structures + Algorithms

At UCI, ICS 46; Data Structure Implementation and Analysis

During the 10-week course, I utilized C++ to implement several data structures, including strings, arrays, linked lists, stacks, queues, hash tables (separate chaining), binary search tree, and AVL trees. In addition, I used C++ to implement algorithms, including:

- Hashing algorithms, including Weiss, PJW, Goodrich, and Preiss.
- Sorting algorithms, including Insertion, Quick, Heap, and Shell.
- Search algorithms, including Breadth First Search, Depth First Search, and Dijkstra’s Shortest Path Algorithm.

I participate in Cyber @ UCI club, where we are currently training to compete in the 2026 CCDC competition. During the training, we practice skills such as:

- Scanning the network using nmap to find and patch holes in the network.
- Enumerating running services on Linux and Windows using systemd and Get-Service, respectively.
- Setting up an Active Directory Domain Controller on Windows, adding computers and users to the domain, and creating OUs for each that have distinct policies.

AREAS OF EXPERTISE

- | | | |
|--------------------------------|------------------------|--------------------------------|
| • JavaScript (including React) | • Python | • Linux |
| • Networking | • Security and privacy | • Technical product management |

PROFESSIONAL EXPERIENCE

DeepFile

Internship, Berlin, Germany

June – August 2025

- Redesigned the application interface by translating Figma concepts into a responsive React + Tailwind layout with an intuitive tabular design.
- Developed the Upload feature for the server version, enabling users to select and index files for search and query functionality.
- Refactored UI components to leverage React state management, improving step-tracking across tabs and reducing interface lag.
- Integrated multilingual support using react-i18next, ensuring usability for both German and English-speaking users.

YMCA

Membership coordinator, Sammamish, WA

July 2021 – September 2023

- Managed member services by focusing on excellent customer service, recruiting and retaining members, and supervising front desk staff.

- Key responsibilities included greeting members, processing memberships and registrations, resolving issues, training staff, and conducting facility tours for potential members.
